DEDICATION

This book is dedicated to you. Yes! If you are a Forex Trader, looking to get started trading the Forex market or just curious about how the Forex market works then this book is dedicated to you. You can do it.

RISK DISCLOSURE STATEMENT

Trading any financial market involves risk. This report and all and any of its contents are neither a solicitation nor an offer to Buy/Sell any financial market.

The contents of this material are for general information and educational purposes only (contents shall also mean the website [http:// www.tradermatic.net/](http://www.tradermatic.net/) or any website the content is hosted on, and any email correspondence or newsletters or postings related to such website). Every effort has been made to represent this product and its potential accurately. There is no guarantee that you will earn any money using the techniques, ideas, and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using our product, ideas, and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy.

This book does not make any representation that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or anywhere on [http:// www.tradermatic.net/](http://www.tradermatic.net/). Past performance is not indicative of future results.

By purchasing any content, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read herewith. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Hidden Riches, LLC, in association with [http:// www. 4figuresdaily fxsystem.com/](http://www.4figuresdailyfxsystem.com/), the website, content, and its representatives do not and cannot give investment advice or invite customers or readers to engage in investments through this course or any part of it.

The information provided in this content is not intended for distribution to or for use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. There are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. Besides, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results, all of which can adversely affect actual trading results.

We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting <http://www.4figuresdailyfxsystem.com> and <http://www.tradermatic.net>

Governing law: this policy and the use of this report/eBook, provided in any form, and any content on the website are governed by the laws of the United States of America. Further details on this are stated under the Terms and Conditions on our site. Please ensure you read and agree with all Terms and Conditions as set out on our website before using any of the materials. Your use of the contents is based on your acceptance of such Terms and Conditions and policies as they appear on the site.

ABOUT THE *Author*

WHAT I DO: I trade Forex market for a living and I help my Students and Clients make money trading Forex Market. I work with a lot of struggling and frustrated Forex Traders make profits with trading Forex. Forex market is the largest financial market in the world, and anybody from anywhere in the world can make money trading Forex market.

WHY I TRADE FOREX: There are lot of benefits of trading Forex market over any other Commodities and over any form of other online business.

Some of these advantages are;

- No commissions
- No middlemen
- Low transaction costs
- A 24-hour market
- No fixed lot size
- No one can corner the market
- Leverage
- High liquidity
- Low barriers to Entry
- No blogging
- No FB Slapping

- No YouTube headaches
- No need for cold calling
- No hotel meetings
- No need for chasing people up and down to join your team
- None of those Internet or Affiliate Marketing B.S.
- Only \$100 to start — You don't need a lot of capital or risk losing your life-savings.
- 24-hour market means you can trade any time, 5 days a week. Unlike stocks, you don't need to rush in when "market opens". In fact, with the Brokers my Students and I are using, you can even trade 7 days a week if you choose to trade Cryptos.
- You can focus on a few currency pairs rather than study thousands of stocks.
- Largest market in the world — Over \$5.4 trillion per day versus \$500 billion for stocks!

WHY MY TRADING STRATEGY WORKS

I have a simple 3-steps strategy I adopt that I also teach my Students. It works over 90% of the time.

HOW I TEACH OTHERS

I organize free webinars always where I teach people getting started in the industry how to get started right, you can access my free training at www.fxlivecoaching.com, I also have a 6 months Coaching and Mentoring Program where I carry my Students on my wings and show them what I do. Not do what I say but do what I do

INTRODUCTION

Hi, my name is Emmanuel Adegbola. Friends, clients and some of my students call me "The Forex Apostle." Why? Because I'm a minister of the Gospel and I trade Forex market for a living. Let me use this opportunity to welcome you to the **4 Figures Daily ForexSystem™**.

What you are about to discover is a proven system that anybody can copy to change his or her life with Forex trading. I didn't just name this system **4 Figures Daily ForexSystem™** for the sake of naming.

No! It's indeed a 4 Figures Daily Forex Income System. I also call it the Forex market buffet – all you can eat. In Forex trading, it's about all you can dream of making.

Take for instance the daily income like the ones shown below;

I could go on and on and on with proof that the system you are about to discover could change the status of your Bank account if only you can follow a simple instruction and you don't read this guide like any other books you've read before.

The book you are holding in your hand or reading via your cell phone, tablet, or computer is unlike any Forex books you've read before. Because this is not just a book, it's a System. It's a proven system that has worked for many of my students and I have no doubt that it will work for you.

I'm so excited for you that you are starting this journey. You have made the right decision, and I promise you that this would be the best book you'd ever read in Forex. This is not just a book. It is a simple system you can use to become ultra-rich trading the biggest financial market in the world.

4 Figures Daily ForexSystem™ is a simple but robust system built on our proprietary custom indicator (which you will get instant access to in a moment) to ensure precise entries and the maximum profits possible. With this system you will also get a template that was promised. It is straightforward and painless to install. I will show you how. The installation takes less than 5 minutes.

Yes, it's called the 4 Figures Daily ForexSystem™ because it works clockwise to make you 4 figures daily incomes from the Forex market sooner than you could imagine. It is also beneficial when it comes to finding accurate trend trading entries. Over 70% of Forex Millionaires are Trend Traders.

Just like life, you lose some, and you win some, but what makes you progress in life is to have more wins than losses. As it applies to life, so it applies to Forex and this system. It's not 100% accurate. You could say it gives you more than 80% profitable trades which saves you time and could make you a lot more money. All you have to do is follow the elementary rules we have laid out here; very soon you too will join the Ultra-Rich Club in the Forex world.

It is a very versatile system and can be used on all time frames. So whether you're a scalper or a long-term trader, the 4 Figures Daily ForexSystem™

could help you find more accurate entries and more profitable trades, in less time.

It's quite simple to use and has solid trade management that will ensure risk reduction while it maxes out your profits, so you make more and keep more of it, which is the end goal, right?

To have more money in your account at the end of each trading session.

Because when it comes down to it, making consistent conservative profits every day, and keeping at it, is how you go from broke to profitable and from wherever you are right now to success.

So I hope you have fun with it and of course that it helps you make more money!

The Forex Apostle

FIRST THING FIRST

In this section, what I will be doing is to introduce you to the basics that you need to know to make a fortune with Forex. My goal with this program is to make it as concise as possible.

If you need more info about what I will be introducing in this chapter, then you can get my book "The Beginner's Guide to Mastering Forex Trading" at www.fxguide.info

In there, I go deep into the topics.

Okay, having cleared that, let's get started.

What is Forex?

What's traded in Forex?

How do you make money in Forex?

What do you need to trade Forex?

Forex is deep, but understanding the four questions above should get you started making money from the Forex market.

So, what's Forex?

The word Forex is an Acronym from "Foreign Exchange." If you have ever bought anything online or traveled out of your country to another country then you have been involved in Forex trading.

Fig. 1

Currency trading, Spot market, and Forex market are all the same. People use them interchangeably.

Forex trading means buying one currency while simultaneously selling another currency.

As currencies change in price, Forex Traders hope to make a profit. In other words, as a Forex Trader, you profit with the change in the currency pair price. I won't go into different types of Pairs, Spread and the rest here. Once again, I am trying to make this very easy for you to understand so that we can get to the meat of this book. But if you are brand new to Forex and need more knowledge in this area, please get my book "The Beginner's Guide to Mastering Forex Trading." You can get it for Free at www.fxguide.info

Okay, let's continue. If you think the GBP is going to rise against the USD, you can buy the GBPUSD currency pair low and then (hopefully) sell it at a higher price to make a profit. Of course, if you buy the GBP against the USD (GBPUSD), and the USD strengthens, you will then be in a losing position. So, it's essential to be aware of the risk involved in trading Forex, and not only the reward.

Fig. 2

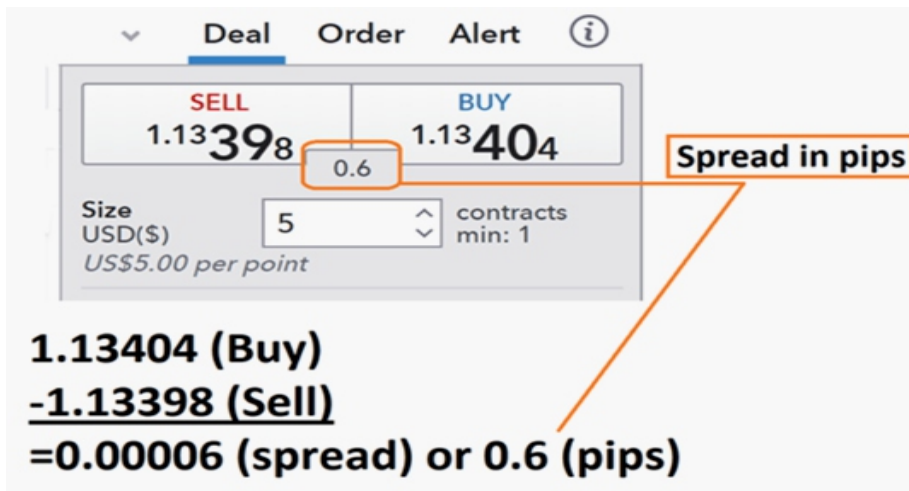

Fig. 3

So, looking at the image above, the Bid (Sell) Price is 1.13398, and the Ask(Buy) price is 1.13404, so subtracting the two prices from each other, we have 0.00006 spread or 0.6 pips

Your Broker makes their money from the Spread while you make money from the number of Pips you are able to harvest from your trades. Don't worry; this

program will show you how to harvest more Pips than you can imagine. So I guess the question you may be asking now is, "what is Pip?"

As mentioned, the Brokers make their money from the Spread, and you as a Forex trader, make your money from the Pips.

A pip, short for point in percentage, is a small measure of change in a currency pair in the Forex market.

So, let's assume in the figure below GBPUSD currency pair moves from point A, which is 1.21073 to point B which is 1.21566, the market moved $1.21566 - 1.21073 = 0.00493$. This is 49 Pips. We ignore the 3, which is the last figure in these 5 decimal places.

Fig. 4

Confused?

Don't be. I will explain this more. Even though I'm trying to make this program very short and concise for you, this part is crucial.

When the price goes up, you buy; when the price goes down, you sell. So, in the example above, if you bought when the currency Pair is 1.21073 and you take your profit when the market gets to 1.21566, it means you have made 49 Pips.

This could mean \$490 or \$49 or \$4.90 or \$0.49, depending on the type of account you are operating.

Please note once again that I'm trying to summarize this section for you as brief as possible, if you need more in-depth knowledge about this, please download my book "The Beginner's Guide to Mastering Forex Trading" at www.fxguide.info, I explained this in detail there.

Let's quickly mention the four different types of accounts that are available here;

Standard Account Type

Mini Account Type

Micro Account Type

And lastly, Nano Account Type

We have different types of Currency Pairs, also. These Currency Pairs have different values per Pip, but in this example, I am going to focus on one major currency Pair which is GBPUSD or EURUSD.

So, for Standard Account Type

1 Standard lot size = \$10.00

1 Mini Lot Size = \$1.00

1 Micro Lot Size = \$0.10

1 Nano Lot Size = \$0.01

Now, do you see how we got the values that we stated above?

I mean this **\$490 or \$49 or \$4.90 or \$0.49**

If your account is Standard, and you get 49 Pips, what you will make will be \$490 (plus or minus the Spread)

If your account size is Standard, and you trade Forex and get 100 Pips from that trade, if the Pair once again is Standard as in our example, you would be making \$1,000.00 (plus or minus the spread)

Now did you get it?
Cool.

Once again, I am trying to make this simple and dummy-proof for you. But if you still need more study on this topic, I would suggest you download my Beginner's Guide to Mastering Forex Trading at www.fxguide.info.

For emphasis sake, please know that different currency pairs have different Pip values. I won't bore you with how these are calculated here. The truth is you don't need to know how they are calculated. You can get Pips Value Calculator online if you need one, but you know what? You don't even need it.

We have Major currency Pairs, Minor Currency Pairs, Exotic Pairs, Indices, Energies, Commodities, Crypto Currencies, Precious metals, etc

All these have different Pip Value. 1,000 Pips in one Pair could actually be just 1 Pip in another Pair.... So when next someone tells you he or she made 10,000 Pips from a trade, you need to ask the person, from what Pair did you get that? Cryptos or Major Currency Pair?

I know I'm flogging this part because I want you to get it.

To bring this section to a close, let's quickly use the example below to recap.

If we have 4 Traders A, B, C and D traded a Major currency Pair GBPUSD and they all made 100 Pips from the trade, below would be how much each of them made based on their account type.

TRADER	ACCOUNT TYPE	# OF PIPS MADE	HOW MUCH IN \$
A	Standard	100 Pips	\$1,000.00
B	Mini	100 Pips	\$100.00
C	Micro	100 Pips	\$10.00
D	Nano	100 Pips	\$1.00

Table 1

Four different Traders could trade, made the same number of Pips, but what they would make in \$\$\$\$ would be different based on their account type.

I want to believe that you have gotten this part now because this is very important.

So, how do you make money in Forex?

You make money in Forex trading through Pips. How many Pips you get determines how much you make. Your ability to enter the market at the right time and exit at the right time is essential. Please read that again. Your ability to enter the market at the right time and exit at the right time is vital. I call this "the perfect entry." That is what makes you money in Forex. Enter at the right time and exit at the right time.

Now, let's quickly discuss another concept you need to understand when it comes to Forex trading and the associated jargon or terms.

TREND

A trend is a tendency for prices to move in a particular direction over a period. Trends can be long term, short term, upward, downward, and even sideways.

In a layman's language, I would say, a trend is the direction in which the market would move. It could move up, down or sideways (ranging)

Over 70 percent of Forex Millionaires are Trend Traders. How many times have you heard the phrase "trend is your friend"?

Yes!

In Forex or any trading, the trend is definitely your friend. You don't want to trade against the trend. But I tell you what: There are a lot of situations that could make you trade against the trend but, we would not discuss that here.

Recognizing the trend is good, but I think recognizing it early enough is the best.

Fig. 5

From the image above (Fig 5), you could see categorically that the trend is down.

Right?

Cool. You got it. Don't worry; we will discuss this deeply later. But looking at the image, you could see that the direction of the market (chart) is down. The price is below that yellow line. So, what you want to be doing is looking to sell. When the price is below you are looking to sell, and when the price is above the yellow line, you are looking to buy. Please, if you don't understand anything so far, read that statement again and take note of it.

From the example above, you could see the price moved downward (the red line), then pause, or what we call retracement in trading, then it moved downward again then retrace and so on.

As long as the price is below the yellow line, we are in downward trend. So, what is it we want to do here?

Sell.

That's right!

Those Lime or Green portions in the chart are Retracement for as long as we are in a downward trend and the red boxes are our potential trading opportunities.

Let's look at another example below;

Fig. 6

Can you tell me what the trend is in Fig 6 above?

That's correct!

The trend is Up. This is BTCUSD (Bitcoin)

As you can see, the trend has been up and as a Trader, what you would be looking to do is to buy at the right time (perfect entry).

Those Lime or Green boxes are buying opportunities since the market is up.

Okay, I bet you get it now?

Cool! Let's continue.

LOWEST LOW AND HIGHEST HIGH

As you could see from Fig 5 and 6 above, there are points on the charts where the market rested before it continued to move, those points are called the highest high or lowest low.

Let me use the figure below to explain this to you.

Fig. 7

Let's assume in the figure above that the trend is up (which it is anyway), the point of entry (perfect entry point) is at B, then the price at A is our Lowest Low Price before our Entry Price.

Do you get it now? You must get this because I will be using these terms a lot in this system.

A swing low (lowest low) is formed when the low of a price at a particular point is lower than the low of the candle to the left and the candle to the right of it.

Take a look at another example below;

Fig. 8

The trend is up because the price is above the Yellow line. We have our blue arrow, and our entry is at point B, so point A is our lowest Low before the entry price at B.

I hope you got this now?
Cool.

Let's now look at downtrend examples next.

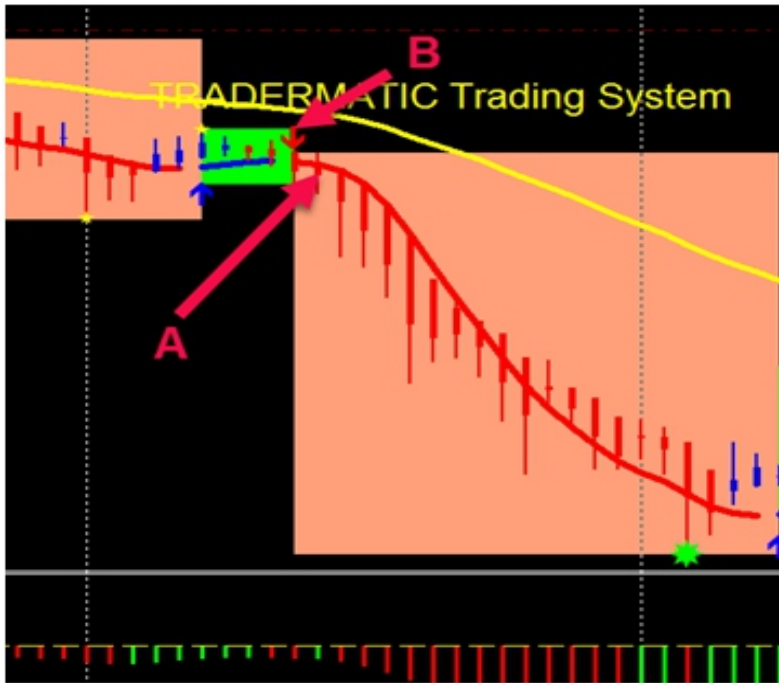

Fig. 9

In Fig 9 above, the trend is down... right? The price is below the yellow line, we have our signal arrow then we enter the trade (we short or sell) at Point A, the highest high the price reached before this entry point is B. So, A is our perfect entry point and B is the Highest High before that entry.

We will be using this term later in this system, so try and get it once and for all.

A swing high (Highest High) is formed when the high of the price at a particular point is greater than the high of the candle to the left and the candle to the right of it.

Next is another example;

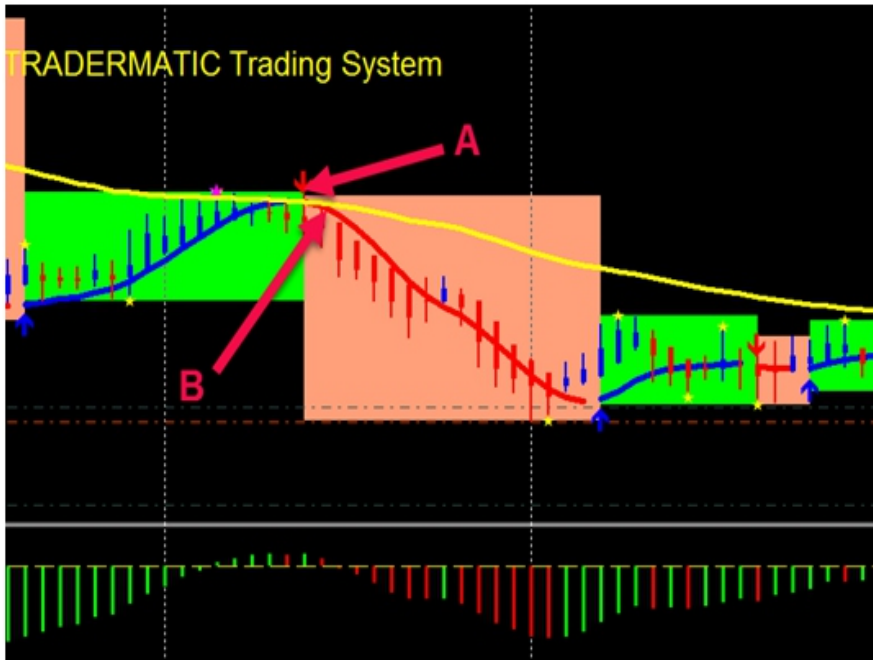

Fig. 10

Looking at the image (Fig 10), the trend is down, our entry price is at point B, and our highest high before this entry price is point A.

Once again, we will be using the prices at these points for our trades, so it's essential we lay this foundation now, and you get it once and for all.

Okay, let me test your knowledge on this.

In Fig 11 below,

What is the trend?

Where is your entry point?

Where is your highest high or lowest low?

Fig. 11

Also, from the Fig 12 below
What is the trend?
Where is your entry point?
Where is your highest high or lowest low?

Fig. 12

Awesome.

Now check your answer to see how you did.

In Fig 11, the trend is up; the entry point is at B and the lowest low before the entry point is at A.

Fig. 13

Fig. 14

In Fig 12, the trend is down; our entry is at point B, and the highest high before this entry point is at A.

Awesome!

Now, let's move forward.

BUY AND SELL

In Forex, when the trend is going up, we are looking for an opportunity to Buy that instrument (that Currency Pair), in this case, when we buy, we say "we go Long"

And when the trend is down, we look for an opportunity to short the Pair, to Short means to sell.

Buy = Long

Sell = Short

I didn't mean to make this material bulky for you at all, but I just realized that there are some things I can't just omit, but I hope you are getting this. Don't worry; we will get to the meat of the system shortly.

Making money with Forex trading is not difficult, but it's quite unfortunate that many traders make it difficult. Have you heard of the word "Keep It Simple Still," KISS? Yes! There is a lot of money in keeping it simple.

Study shows that over 90% of Forex Traders lose over 90% of their accounts within the first 90 days of getting started with Forex trading.

I guess your question would now be if it's so easy to make money in Forex trading, so how come so many people still fail or lose money to Forex Bulls and Bears.

Is that your question?

5 Significant Reasons Why Over 90 Percent of Forex Traders Lose over 90% of their Accounts within The First 90 Days are;

1. **Terrible, outdated technical tools**
2. **Too many Price action Chart patterns to deal with**
3. **Bad money and risk management**
4. **Bad trading psychology**
5. **Lack of a suitable Mentor and Coach**

Let's discuss each of them briefly. OMG! I'm trying to make this as short as possible, but I'm sorry I can't help it; there are some of these kinds of stuff that need to be covered.

1. Terrible, outdated technical tools.

I don't even know how it all started, but all I know is once upon a time, some group of individuals tested some mathematical equations concerning trading, and they worked and before you know it everybody started using them.

Most of these technical tools that traders use on charts are outdated. Some of these Indicators were created when there was nothing like Apple, FB, Amazon, etc. Don't you think it's high time we modified some of these tools or removed them from our charts?

Some of these Technical Indicators that need to be removed from our charts are:

ADX indicator (Average Directional Index) established in 1978, Stochastic: 1950s yes! You are using an indicator from the 1950s as if nothing has ever evolved since then, Bollinger Bands, 1982/83. Just imagine that? And a lot of them that I will not mention here.

The point is a lot has changed, and we need to change with the change.

2. Too many Price action Chart patterns to deal with.

There are way too many price action patters to deal with. I remember when I was getting started and I wanted to be trading the Price Action or what some traders call "Naked Chart," I noticed that there are just so many chart patterns to deal with as a Forex Newbie. Imagine you as a Forex trader have to deal with the following;

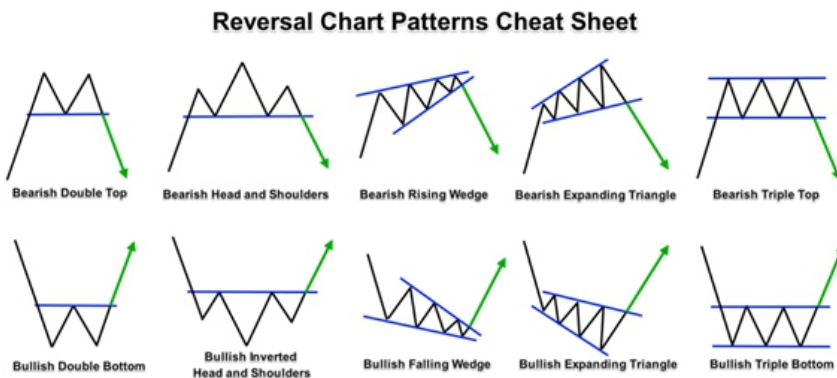

Fig. 15 (a)

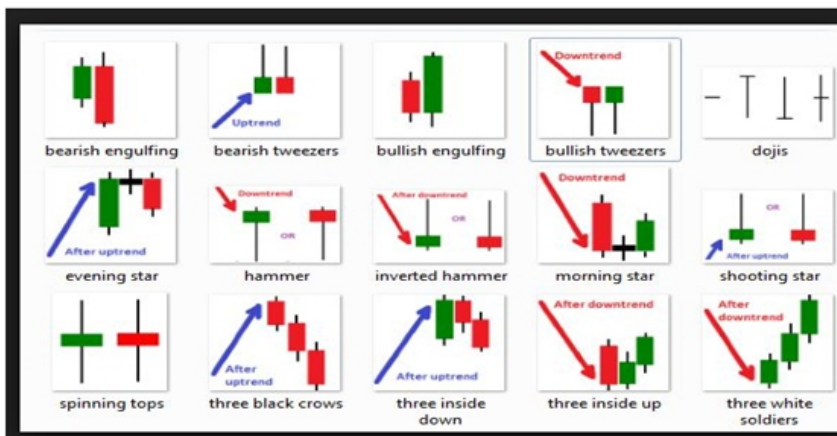

Fig. 15 (b)

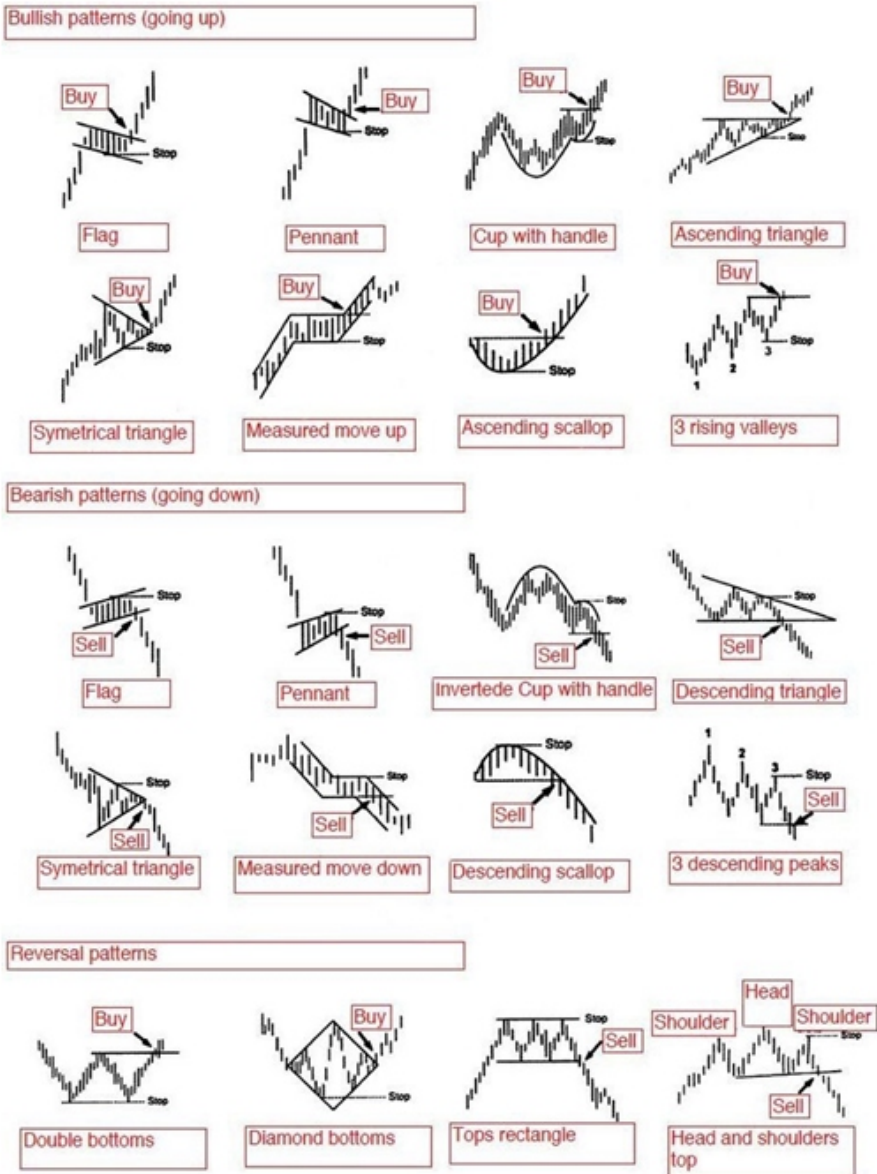

Fig. 15 (c)

Just imagine you as a Forex trading Newbie has to deal with all the above chart patterns. Is that not crazy? That's why the majority lose money.

3. Bad money and risk management

Many people would start an account with just \$200 or \$500, and they would want to make a million Dollars from that same account within a month, starting with a get-rich-quick mentality. This makes them over-leverage their accounts. Many Brokers would promise to double your first deposit into your live account because they know you would lose it anyway.

4. Bad trading psychology

FOMO (Fear Of Missing Out), Fear, Greed, and a lot of these factors make traders lose money. Let's keep it real. Imagine someone that opened a Forex account and put all his bank account balance in a trade. That person would trade with fear of losing and that would make him/her lose. Or FOMO, you want to force the trade even if there's no trading opportunity.

5. Lack of a good Mentor and Coach

"If You Think Education Is Expensive, Try Ignorance." This is a well-known quote, and it is well worth reflecting upon. But it's true. The best investment you can make is on yourself. If you think you are going to make a million Dollar from a free YouTube video or a \$7 ebook then have a second rethink. Yes, you can start from there, but you don't want to remain there. There is a reason why successful people in the world work with mentors. I will talk more about this later.

There are a lot of reasons why people fail but let's stop at these five.

What Do You Need to Trade Forex?

Once again, I'm going to make this very easy for you. Many people trade Forex or try to trade Forex as a hobby, and it cost them as hobby does. Here, we are talking about business. So, to make this a real business, you need to treat it as a business.

So, to trade Forex market, you will need the following;

1. **Desire / Interest**
2. **Internet-Connected Computer**
3. **Brokerage Account**
4. **Trading Platform (Software)**
5. **TraderMaticTM**
6. **Education**

1. Desire or Interest.

If you are reading this book, then you've already had some interest in Forex trading. But, don't just have the desire, make it a burning desire. Make it as if your life depends on it. I know you've probably read so many books on Forex trading or bought many trading software for Forex trading, but I want you to promise me and promise yourself that you will make this work. You will work this system to make your first 6 Figure in Forex.

2. Internet-Connected Computer.

Yes! Internet-connected computer. A Desktop or a Laptop preferably. Many Traders or "ForexTraderWannaBes" like using Cell phone to trade Forex, there is nothing wrong with it but the only problem is the limitation you would have with using only a cell phone to trade. You can't do a lot of analysis that you would need, and you can't install custom indicator or template

3. Brokerage Account.

We have discussed the four different types of accounts that you may operate as a Forex trader. I would recommend you watch this video on YouTube <https://www.youtube.com/watch?v=ah9Xr9kmzOQ&t=3s> titled "How to Select a Good Forex Broker.

In the video, I exposed seven things you need to consider before you join or sign up with any Forex Broker and those seven factors are;

- Regulation
- Security
- Leverage
- Execution
- Customer Service

- Trading Rules
- Reviews

I discuss these seven points deeply in the video I asked you to watch on YouTube. I am trying not to make this material another bulky book.

I have been using FXChoice for over a decade now, and they meet those seven requirements listed above. To sign up with FXChoice, visit www.joinfxchoice.com to sign up (that's my affiliate link). I won't go into details on how to create an account here; it's a straightforward process which I believe you shouldn't find it difficult to get but if you have to learn how, please watch this videos on YouTube;

How to create a Demo account on FXChoice

<https://www.youtube.com/watch?v=-MDSAacwL548>

How to create a live account on FXChoice

<https://www.youtube.com/watch?v=7dR87PxWu8Q>

How to download MT4 from FXChoice

<https://www.youtube.com/watch?v=2xHmuNN4Kg0&t=1s>

4. Trading Software

There are different kinds of trading platforms but with this system, we will be using MT4 trading platform. To download this, visit www.fxchoice.com, click on Trading Platform and select MetaTrader4

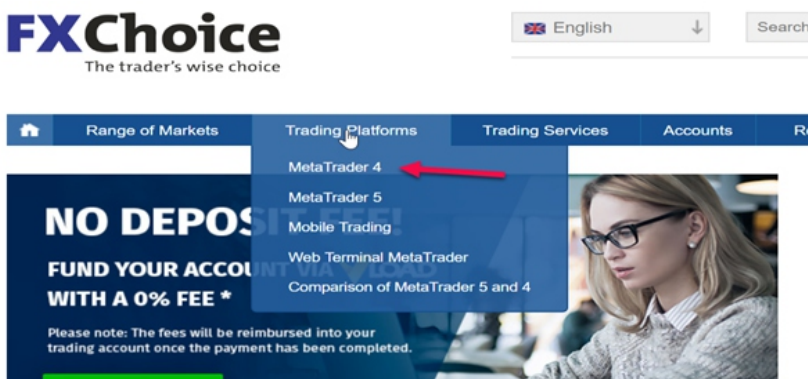

Fig. 16

Just follow through the steps to download and install MT4. Once you install that, you should be good to go. Once again, please note that I am not going into how to install MT4 here, but if you have to learn how to do that, please go to my YouTube channel here https://www.youtube.com/c/cryptoforexinstitute?sub_confirmation=1 and click on the videos, you will see the video that discusses the installation.

5. TraderMatic™ Trading System

TraderMatic is a proprietary customized Forex trading system that uses color-coding to siphon cash legally from the Forex market. It's a trend trading system. As mentioned previously, over 70 percent of Forex Millionaires are Trend Traders. And this is what we are going to be using in this book and for all the examples. I will discuss more on how to get it later but first let's discuss why we need it.

TraderMatic™ is a suite of special, COLOR-CODED indicators programmed together with next-generation trading algorithm already loaded onto an MT4 template for you! You will be ready to trade and start making money sooner than you could imagine!

Why TraderMatic?

- User-Friendly Visual Interface
- Minimize Time Investment
- Next Generation Trading Algorithm
- Highly Profitable Trading Signals
- Multiple Trading Styles
- Unique Price Volatility Detection
- Built-In Smart Technology
- Reliable Signals 100% No Repaint
- Supports All Major Currency Pairs
- Easy Color Coded
- Works with Stocks, Futures, Indices, Metals, Cryptos and Exotics

Now that you have known all you need to trade the Forex market and you have also seen why we need the TraderMatic trading system to make our goal of making money from the Forex market a reality let's now get to the meat of this system.

THE SYSTEM

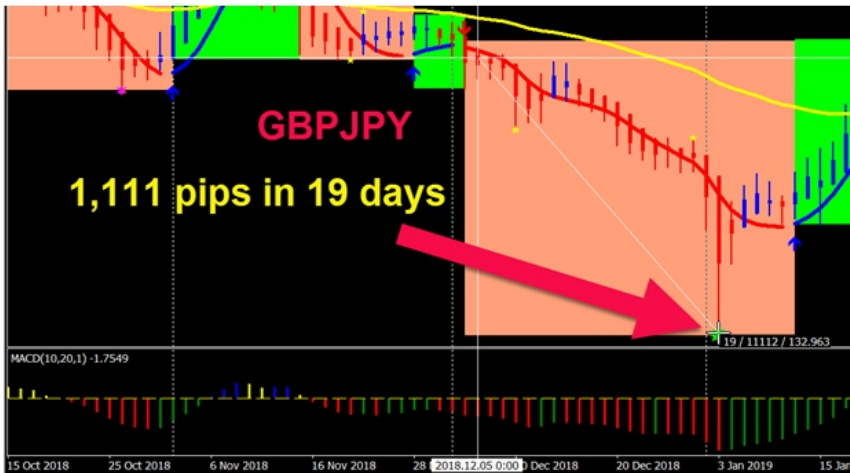

Fig. 17

Before I describe the system, let me ask you. When you were learning how to drive, did you know everything that makes up the car? I mean all the parts in your car, did you know the details of every one of the parts? I guess your answer is No.

Right?

What you were concerned with was how to drive, what to do when you see this and that, how to apply the brake, and so on.

The same approach we are going to follow for this system. I want to assume that you have probably not traded before, so permit me to call you a Forex newbie, just like when you were trying to learn how to drive, nobody taught you everything about the parts of the car.

Fig 17 above consists of four major indicators that have been programmed to work together to make your trading easy, fun and profitable.

Let's take a look at the two images below;

Fig. 18 (a)

Fig. 18 (b)

Fig 18-A and Fig 18-B represent GBPCHF H1, which of the two charts do you find attractive as a Trader?

I don't know about you, but as for me, I prefer the Fig 18-B, and that's why we are going to be using it for this system.

There is so much noise in Fig 18-A, but Fig 18-B filters the noise. I don't need to stress my brain before I know what to do. When you learn how to trade the Forex market, what you learn is when to Buy and when to Sell. Know when to enter a trade and know when to exit the trade.

With Fig 18-B, it makes that easy for me.

So, in summary, the system consists of four custom Indicators namely;

- **HeikenAshi Candlestick.** (I won't discuss this in detail but know that this irregular candlestick filters out noise in the market, compare to the regular candlestick which is full of noise)
- **The Yellow Line (50EMA)**
- **The Trend line and the Box**
- **The MACD Pro**

Once again, I'm not discussing all these custom indicators separately here, but my goal is to let you know how to trade with this system. How they work together and that's it. If you want to learn about each of the tools then you can get my book "The Beginner's Guide to Mastering Forex Trading" at www.fxguide.info

THE TRADE RULES

Now, let's have a look at the rules we need to use, so we trade the system effectively.

BUY (LONG) Trade Rules

Fig. 19

The trend is up when the following conditions are met as shown in fig 19 above.

A = The Price is above the Yellow line A (The 50 EMA)

B = The Box is Lime

C = The HeikenAshi Candlestick is Blue and above the Yellow line

D = The MACD Pro is Lime and rising. (It could also be below the zero line but rising)

There is a Blue signal arrow giving us a signal to buy. If you are an aggressive trader, you could go long immediately after the candle closes, but for conservative traders, I would recommend you only take the long trades if and only if the conditions above are met.

Stop Loss and Take Profit for Buy Orders

Do you still remember the concept discussed above? The Lowest Low and the Highest High? This is where you would need to use it in your trading.

Applying the Stop Loss and Take Profit with TraderMatic depends on what kind of trader you are. There are different ways you can adopt to manage your risk.

Stop Loss for Buy Signal Order

In the figure below, B is the Buy Order Signal TraderMatic gives (that's the Blue arrow) – that is, if your setting is Blue, You let the candle closes, then at the opening of the next candle, you go long, then place your stop loss 3 or 5 PIPS below point A. A is the Lowest Low before the Signal.

Fig. 20

So, in this case, the red line (C) as indicated in the fig below is our Stop Loss

Fig. 21

Did you get it? Cool.

You will learn more about this if you could join our coaching program at www.fxcertification.com

The Second strategy for setting your stop-loss is for you to use a fixed number of PIPs below your entry point. We found the first strategy explained above to be more reliable though.

Okay, let's talk about Take Profit

Same as Stop Loss, there are two strategies also you can adopt, the first is to look into your left on the Chart, use the nearest Highest High that you could see (that's point A in the fig below), or you can use the Resistance line at point B.

Fig. 22

Another example of setting the Take Profit is shown next;

Fig. 23

As shown in Fig 23, A is the Entry point because it met all the conditions stated above, B is the Stop Loss, and C is the Take Profit Target.

Okay, let's try and make this easy especially if you are starting new.

If you are new to this, Buy when you see the Blue Arrow pointed Up, let the trade run until you see Red Arrow, then exit the trade. It's as simple as that.

Or Sell when you see Red arrow, let the trade run and exit when you see a Blue Arrow. It's as simple as that.

But, make sure that you allow the candle at which you get the signal arrow to close before you enter the trade.

In most of our trades, we don't apply SL and TP; we just let it run. We enter when we see Blue as long as the Trade is confirmed by the MACD Pro Indicator and all conditions are met. Then we exit when the red arrow shows up.

Be sure that the candle at which the signal shows closes before you place your trade. It's very IMPORTANT.

Sometimes, we use Trailing Stop to take Profit as the trade goes along. Nobody has ever gone broke taking a profit. Right?

SELL (SHORT) Trade Rules

Fig. 24

To go Short (Sell), the following conditions must be met;

A = the Yellow line (50EMA) must be above the Price.

B = the HeikenAshi Candlestick must be Red

C = the Box must be Magenta

D = MACD Pro must be Red, under the zero line or Above the Zero line but descending.

Let's take one or two examples;

Fig. 25

As you can see from Fig 25 above, all conditions for Short were met. So our Entry price is at point A, B is the Highest High before point A, so our Stop Loss is 3 or 5 Pips above B at C, then looking into our Left, we were able to set our Take Profit Target to be at D.

Another example is below;

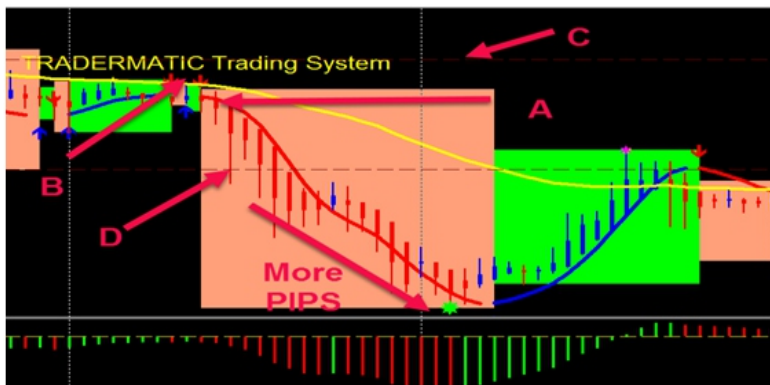

Fig. 26

In Fig 26 above, A is our Entry point, B is the Highest High point before the Entry Price, then C is our Stop Loss and D is our Profit Target.

You could also notice that the market went ahead and even moved lower than our Profit target; that's why most of the time, we just allowed the trade to run till we see a reverse signal then we close the trade.

Remember that you can also use a Specific number of Pips as your Stop Loss and Take Profit putting your Risk-to-Reward ratio into consideration.

For instance, you could use Stop Loss to be 20 Pips, and then your Profit Target could be 40 Pips. This would be 1:2 Risk-to-Reward ratio.

We dive more into all these areas in our coaching and mentoring program which you can get details at www.fxcertification.com

Let's now look into more trade examples, potential risk, potential reward (income), and so on.

Trade Example 1

Fig. 27 – 256 Pips in 18Hrs

Please take note of point A, that's where we have our signal to Buy, but I didn't take that trade because it was below the Yellow Line (50EMA).

I waited for the right time at Point B, when the price was above the Yellow line, then my Stop Loss was between those 2 blue Support lines where B is written, and I let the trade run till when I saw the reverse signal at C. You could see the number of Pips harvested by D, that's 256 Pips. That was \$2,560.00 income for Standard account size, \$256.00 for mini account size, \$25.60 for micro account and \$2.56 for nano account size (this has been explained previously)

Trade Example 2

Fig. 28 – 680 Pips = \$6,800 on Standard Account Size

In Fig 28 above, A is where we got the signal to Sell, it fulfilled all the conditions to go Short, so B was our Entry Price, E was the Highest High before the Entry point. Therefore our Stop Loss was at F, we let the trade run till reverse signal was generated and we closed the trade with 680 Pips profit.

That is \$6,800 income on Standard account type, \$680.00 on Mini account size, \$68.00 on Micro and \$6.80 on a Nano account size.

TRADE MANAGEMENT

In order to harvest or siphon even more pips with this system, you could add a second target and incorporate some effective and profitable trade management.

The first target, as per the rules, is set after the first swing point forms as the case might be and your second target will be the next swing point.

To manage the trade, you should do the following:

1. When the price reaches your first target (first swing point), close half of your position.
2. Move the Stop Loss to your break-even point (your entry level)
3. At this point, you've banked some pips which are safely stored in your account. If the price reaches the second target, you'll bank some more. In the event that price reverses and takes you out of a trade (by hitting your Stop Loss), you will not lose any money, since the Stop Loss is moved to your break-even point (the level of your entry), and so you're in a very good position.

RISK AND MONEY MANAGEMENT

Risk management depends on your personality but if you asked me I would suggest for you not to risk more than 5 percent of your account on any single trade and try and open a trade at a time. Demo trade this system on a Demo account for at least two months, be sure you are profitable on a Demo account and then you can go live. If you are not making money on a Demo account then there's no proof that you will make money on a live account.

About which lot size to trade; I teach my students to trade 0.01 lot size on every \$100 account. That means if your account is \$1,000, you could be trading 0.1 lot size on H1 or M15 Timeframe.

Please note that the timeframe you trade also depends on your personality. There are a lot of advantages in trading the higher timeframe but if you are not patient you can't trade those timeframes. Like H4 or D1 or even Weekly Charts. Do not trade a weak/slow market – outside recommended trading hours (London or US sessions). Signals never work well on a weak market; this has been proven many times.

The London session is the largest market, and it opens at 08:00 GMT or 03:00 EST and closes at 17:00 GMT or 12:00 EST.

Trading is best between 08:00 GMT and 10:00 GMT

The New York session opens at 13:00 GMT or 08:00 EST and closes at 22:00 GMT or 17:00 EST.

The best trades occur in the first 2-3 hours of any trade session apart from the News events. The time is shown in 24:00 format.

IMPORTANT:

It is imperative to trade only following the current trend! It will cut BIG MAJORITY of bad trades! Avoid trading against trend at all times.

Examples:

Trend is UP, and the price reaches Buy Entry Level – it's OK to open the trade.

Trend is DOWN, and the price reaches Sell Entry Level – it's OK to open the trade.

Trend is UP, and the price reaches Sell Entry Level – NO TRADE! Wait for the next set of BUY/SELL Levels.

Trend is DOWN, and the price reaches Buy Entry Level – NO TRADE! Wait for the next set of BUY/SELL Levels.

Also, stay away from trading when the market is flat, in unclear trend or sideways trends.

Finally! Forex Trading is Fun and Easy!

Millions of People are making Money Daily with Their Computers, now it's Your Turn to Join Them.

Introducing my Simple Revolutionary Trading Software that makes you money clockwise from Forex market.

Your suite of special COLOR CODED indicators are already loaded onto a MT4 template for you! You will be ready to trade and start making money sooner that you could imagine!

HOW TO MAKE IT BIG IN FOREX!

People say it takes years to get good enough to make big money from anything, especially from Forex trading.

If you go onto online forums, you'll see comments like:

"It takes many years of practice, time, and dedication before you can become successful."

"It takes time, determination, skill, and discipline to build up your account to a reasonable size."

"You can't start an account with a few hundred dollars and make a killing."

"You should have at least \$10,000 of trading capital you can afford to lose in an account before you start."

"You can't make gigantic profits without taking gigantic risks."

When I see comments like this on Forex trading forums, I can't help but have a little chuckle to myself.

Why?

Because I've helped many beginning traders make small fortunes and build wealth trading Forex.

And they didn't need to have thousands of dollars in their bank accounts.

They didn't even need to take any enormous risks.

And it didn't take them years, or even months. It took a few weeks and in some cases just a few days.

How?

I have a simple and proven system that turns \$150 into \$7,523.54 in under 30 Days even if you have never traded before.

It has AI automation which will enable you to spot trends, take PIPS, and achieve accurate trade selection with every trading session even if you're just starting out.

This system will make you think like a pro trader as you'll discover how to trade with an almost perfect 100% win rate.

However, not only will I give you access to this Proprietary software. I'll also work with you 1-on-1 base on your schedule and availability to make sure that you are up and running making profit in less time than you could imagine.

I'll reveal every secret I've learned from working with some of the best traders in the world over the decade.

So you'll gain knowledge like:

- How to accurately and quickly read price charts;
- How to read, translate, and generate trade signals;
- How to analyze the market;
- and how to accurately predict price trends and make profitable trading decisions

What's more, I'll reveal how to pick certain times of the day, regardless of where you live, so you don't need to be staring at the screen all day and can enjoy the money you make.

The truth is, while I disagree with what people say online, I get where they're coming from.

After all, statistics say 90% of beginners lose around 90% of their capital within their first 90 days of trading.

Nevertheless the results of my system and training speak for themselves.

For example, here are just some of the results the people I taught this secret have made:

Don in NY made \$9,648 in one month.

Wale Adebajo made \$3,895 in one month.

Alexzander Riddle made \$10,248 in one month.

Christie made \$30,078 in one month.

Simeon Paul made \$8,280 in one month.

Tomi Ojo made \$51,184 in one month.

Charles Adeyemi made \$12,484 in one month.

Annie Orr made \$4,392 in one month.

Brian Higdon made \$5,091 in one month.

Now It's YOUR Turn to Get a Piece of the Action

These people are now living the Forex dream...

Living in luxurious homes, driving sports cars, going on exotic vacations, never having to worry about where their next paycheck is coming from.

Once you discover this system for yourself, YOU can join them in living the high life.

However, to train people in this system requires my full concentration and commitment.

And there are only so many people I can help.

Wanna learn how to trade the Forex market for a living?

You can start and grow a "Hyper Profitable" Forex Trading Business Even If You Have Zero Trading Experience.

Let's face it! Making money from Forex market could be tough especially if you are just getting started. The truth is making money with Forex trading doesn't have to be tough or complicated as many people complicate the process.

There's what I call the "Art & Science of Trading Forex", If you don't know it, then you don't know it...PERIOD!

In Forex trading, Right Skill-set + Right Tool-set + Right Mindset = \$\$\$\$\$\$\$ and happiness or Money in the Bank.

If you miss any of the formula above then you will keep losing money to the Forex Sharks, Bulls and Bears.

Have you ever asked yourself why over 99% of Forex Traders and "Forex Traders WannaBes" lose money?

Yes! It's just only few 1% of us that actually make money from the Forex market.

I would love to invite you to a webinar presentation where I will be exposing my entire secrets on how I siphon cash non-stop from the Forex market.

I will be revealing my 3-steps proven system that I use to make money from the Market always.

You will also be discovering the good, the bad and the ugly of the Forex market. You will discover my 5 golden rules of Forex trading and lastly, I will reveal 4 major reasons many Traders lose money in Forex trading...

Either you are just getting started, or you've been trading for a while with no serious profits, then this FREE webinar training is for you.

If you are ready to join the few 1% that profit from the Forex market then visit the website address below to reserve your seat.... limited seats are available.

==>> www.vipcoaching.us

I look forward to seeing you on the webinar and I look forward to helping you getting started making a living with Forex trading.

Warmly,

EMMANUELADEGBOLA
